

Package ‘testDriveR’

February 6, 2019

Type Package

Title Teaching Data for Statistics and Data Science

Version 0.5.1

Description Provides data sets for teaching statistics and data science courses. It includes a sample of data from John Edmund Kerrich's famous coinflip experiment. These are data that I use for teaching SOC 4015 / SOC 5050 at Saint Louis University (SLU). The package also contains an R Markdown template with the required formatting for assignments in my courses SOC 4015, SOC 4650, SOC 5050, and SOC 5650 at SLU.

License GPL-3

R topics documented:

auto17	2
childMortality	3
gss14	4
gss14_simple	5
kerrich	6
testDriveR	7
Index	8

auto17

Model Year 2017 Vehicles

Description

A data set containing model year 2017 vehicles for sale in the United States.

Usage

```
data(auto17)
```

Format

A data frame with 1216 rows and 21 variables:

id DOT vehicle ID number
mfr vehicle manufacturer
mfrDivision vehicle brand
carLine vehicle name
carClass vehicle type, numeric
carClassStr vehicle type, string
cityFE fuel economy, city
hwyFE fuel economy, highway
combFE fuel economy, combined
guzzlerStr poor fuel economy
fuelStr fuel, abbrev.
fuelStr2 fuel, full
fuelCost estimated fuel cost
displ engine displacement
transStr transmission, full
transStr2 transmission, abbrev.
gears number of gears
cyl number of cylinders
airAsp air aspiration method
driveStr vehicle drive type, abbrev.
driveStr2 vehicle drive type, full

Examples

```
str(auto17)
head(auto17)
```

childMortality	<i>UNICEF Childhood Mortality Data</i>
----------------	--

Description

A data set containing time series data by country for estimated under-5, infant, and neonatal mortality rates.

Usage

```
data(childMortality)
```

Format

A data frame with 28982 rows and 6 variables:

countryISO two-letter country code

countryName full name of country

continent name of continent

category type of mortality rate - infant_MR, child_MR, or under5_MR

year year of estimate

estimate estimated mortality rate

Source

<http://childmortality.org>

Examples

```
str(childMortality)
```

gss14

2014 General Social Survey

Description

A data set containing data on work, salary, and education from the 2014 General Social Survey. Missing data are explicitly identified with NAs and all data are represented as factors when appropriate.

Usage

```
data(gss14)
```

Format

A data frame with 2538 rows and 19 variables:

YEAR GSS year for this respondent
INCOME06 Total family income (2006 version)
INCOM16 Rs family income when 16 yrs old
REG16 Region of residence, age 16
RACE Race of respondent
SEX Respondents sex
SPDEG Spouses highest degree
MADEG Mothers highest degree
PADEG Fathers highest degree
DEGREE Rs highest degree
CHILDS Number of children
SPWRKSLF Spouse self-emp. or works for somebody
SPHRS1 Number of hrs spouse worked last week
MARITAL Marital status
WRKSLF R self-emp or works for somebody
HRS1 Number of hours worked last week
WRKSTAT Labor force status
ID_ Respondent id number
BALLOT Ballot used for interview

Source

Examples

```
str(gss14)
head(gss14)
```

gss14_simple

2014 General Social Survey (Simplified)

Description

A data set containing data on work, salary, and education from the 2014 General Social Survey. Missing data are not explicitly identified with NAs and all data are represented numerically instead of as factors when appropriate.

Usage

```
data(gss14_simple)
```

Format

A data frame with 2538 rows and 19 variables:

YEAR GSS year for this respondent
INCOME06 Total family income (2006 version)
INCOM16 Rs family income when 16 yrs old
REG16 Region of residence, age 16
RACE Race of respondent
SEX Respondents sex
SPDEG Spouses highest degree
MADEG Mothers highest degree
PADEG Fathers highest degree
DEGREE Rs highest degree
CHILDS Number of children
SPWRKSLF Spouse self-emp. or works for somebody
SPHRS1 Number of hrs spouse worked last week
MARITAL Marital status
WRKSLF R self-emp or works for somebody
HRS1 Number of hours worked last week
WRKSTAT Labor force status
ID_ Respondent id number
BALLOT Ballot used for interview

Source

Examples

```
str(gss14_simple)
head(gss14_simple)
```

kerrich

Kerrich Coin Toss Trial Outcomes

Description

A data set containing 2,000 trials of coin flips from statistician John Edmund Kerrich's 1940s experiments while imprisoned by the Nazis during World War Two.

Usage

```
data(kerrich)
```

Format

A data frame with 1216 rows and 21 variables:

id trial

outcome outcome of each trial; TRUE = heads, FALSE = tails

average cumulative mean of outcomes

https://books.google.com/books/about/An_experimental_introduction_to_the_theo.html?id=JBTvAAAAMAAJ&hl=en

References

https://en.wikipedia.org/wiki/John_Edmund_Kerrich

Examples

```
str(kerrich)

if (require("ggplot2")) {
  ggplot(data = kerrich) +
    geom_hline(mapping = aes(yintercept = .5, color = "p(heads)")) +
    geom_line(mapping = aes(x = id, y = average)) +
    ylim(0,1)
}
```

Description

The goal of testDriveR is to provide data sets for teaching statistics and data science courses. This package includes a sample of data from John Edmund Kerrich's famous coinflip experiment. These are data that I use for teaching [SOC 4015 / SOC 5050](#) at [Saint Louis University](#).

Details

There are currently five data sets that are included in the package:

- [auto17](#) - A data set containing model year 2017 vehicles for sale in the United States
- [childMortality](#) - A data set containing childhood mortality time series data by country from UNICEF
- [gss14](#) - A data set containing a selection of variables related to work and education from the 2014 General Social Survey
- [gss14_simple](#) - A simple version of gss14 without factors created and without missing data explicitly declared
- [kerrich](#) - A data set containing 2000 trials of coin flips by [John Edmund Kerrich](#)
